SUMMARY

Performance media leader directing strategy, investment, and optimization across a portfolio representing \$75M+ in client media spend, with deep experience in regulated healthcare marketing — Medicare patient acquisition, qualified-outcome measurement, and compliant creative governance. Combines media planning and budget ownership with test-and-learn rigor and hands-on analytics, repeatedly translating complex clinical and platform data into compliant, decision-ready strategy.

EXPERIENCE

Ovative Group — *Senior Analyst, Search Engine Marketing · Chicago, IL* **June 2023 – Present**

- Direct paid media strategy, planning, and investment across a portfolio representing \$75M+ in client media spend — six healthcare business units under a Fortune 5 payer, plus a national retail brand and a global logistics provider — owning budget pacing, performance optimization, and recommendation delivery to senior client stakeholders.
- Drove a 175% YoY increase in Medicare enrollments during AEP by expanding reach among high-priority patient segments — broadened condition and plan-intent keyword coverage, restructured campaigns, and rebuilt conversion pathways tied to enrollment pipeline and revenue goals.
- Designed audience and conversion architecture that optimized media toward qualified patient outcomes — call-quality spoken-phrase signals, value-based bidding frameworks, and KPI hierarchies — and protected bidding models with data exclusions after resolving a full conversion-tracking outage.
- Reversed declining efficiency on a national retail brand — cut spend 13% YoY while growing revenue 5% and lifting ROAS from \$7.30 to \$8.80 — then reinvested savings into more incremental tactics, giving the client a defensible portfolio-level growth story.
- Ran a disciplined test-and-learn program: quantified emerging AI-driven ad formats head-to-head against incumbent tactics on spend and ROI, gated automation pilots behind conversion-signal readiness, and piloted ads on emerging AI search surfaces — owning conversion tracking setup with the client team.
- Safeguarded compliance in regulated healthcare media — identified AI-generated human imagery in live ads as an emerging regulatory exposure, audited creative across the portfolio and drove full replacement with sourced assets, and managed healthcare certification and policy escalations directly with Google and Microsoft.
- Built the reporting and measurement infrastructure behind investment decisions — automated multi-source reporting, pacing and forecasting models, and pre-publish data-integrity gates engineered so an invented number cannot ship — reducing quarterly reporting time by 300+ hours.
- Operated at the center of a matrixed delivery model — codified the team’s operating model (named ownership, escalation paths, QA gates), partnered across SEO, analytics, client brand and compliance stakeholders, and platform reps, and developed junior talent via a self-authored 13-week curriculum with delegated account ownership.

Zero To Secure — *Founder · Chicago, IL* **July 2025 – Present**

- Built a bootstrapped DTC e-commerce brand end to end — product positioning, Shopify development, SEO content strategy, and go-to-market execution as a solo operator.
- Translated complex technical concepts into accessible, trust-building consumer messaging — owning lifecycle content strategy, funnel analysis, and AI-assisted content production.

AbbVie — *Strategic Initiatives Analyst · North Chicago, IL* **March 2022 – May 2023**

- Supported the \$63B AbbVie–Allergan enterprise integration by resolving cross-functional process bottlenecks and managing a 2,400-user project platform.
- Built reporting tools that improved operational visibility across integration workstreams within a large-scale organizational data environment.

EDUCATION

University of Wisconsin–Madison — Bachelor of Business Administration; double major, Marketing and Risk Management & Insurance **May 2023**
